HACKATHON PRESENTATION

SMART TASKS

AI that makes tasks easier to tackle

A smarter to-do list that reduces the effort between planning and doing.

Team: Daiyan Mahir,Julian Cadar,Saud Ali, Brian Mpanzu

A to-do list tells you what. Not how.

PRIORITISE

What should I do first?

ESTIMATE

How important is it?

UNDERSTAND

What does it involve?

GET STARTED

Where can I find help?

With many tasks, this becomes repetitive, time-consuming and mentally draining.

From a task to a useful plan

The user adds a task; the app enriches it in the background.

1

ADD

Write a task in natural language

→

2

INTERPRET

AI analyses what it involves

→

3

ENRICH

Summary and priority

→

4

ACT

Useful resources and next steps

AI becomes part of the workflow — not a separate destination.

The difference is the interaction model

We are not claiming chatbots are not AI; we are choosing a different way to make AI useful.

A SEPARATE CHATBOT

- Open a separate tool
- Think of a prompt and ask
- Bring the answer back to the task

AI BUILT INTO OUR APP

- Add a task as normal
- Get relevant help in context
- Stay focused on completing it

AI is embedded in the user's existing workflow instead of becoming another workflow.

Reduce cognitive load. Increase clarity.

We want users to spend less energy planning and more energy doing.

LESS MANUAL PLANNING

Reduce repetitive organisation and estimation.

CLEARER TASKS

Understand the task and how to begin.

CONTEXTUAL RESOURCES

Find useful links based on the task.

ONE FAMILIAR WORKFLOW

Keep help inside the to-do list.

The goal: make the next step clearer and easier to take.

One task can unlock several kinds of help

Example task: “Make dinner”

SUMMARY Prepare a meal using available ingredients and time.

PRIORITY A suggested priority to help plan the evening.

RELEVANT RESOURCES Recipe ideas or cooking instructions.

A coding task could instead surface documentation, examples or tutorials.

We're not building another place to talk to AI.

We're using AI to make an everyday application work more intelligently — helping people understand, plan and act with less effort.
